

Security Analysis

Achieve an in depth understanding
of your organisation's level of security

Take your organisation to the next level with Dubex Security Analysis

When an extant foundation of information security is present in your organisation, Dubex Security Analysis provides you with an in depth understanding of your organisation's current level of security and implemented initiatives within information security.

Once the current level of security is determined, a focused project can be executed that leads the company to your desired level of security.

The analysis is based on qualitative interviews with key members of your IT-staff and other relevant personnel. The collected information will be written into a report where your company will gain:

\$10.5tn

Predicted cost of cybercrime
by 2025

Source: Cisco - 2022 Cybersecurity Almanac

- An in depth understanding of the current level of information security.
- A detailed description and prioritised list of recommendations for improvements with associated weaknesses.
- The project is concluded with a walk-through meeting of the key points.

KEY SERVICE BENEFITS

Elevate the existing work
with information security to
new heights

Achieve a detailed insight of
the current security level

Streamline the interminable
work of information security
inside the organisation
